(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g)
progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                          70
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, prostate cancer, cytostatic, carcinogen, pharmacodyanamic marker, pharmacogenomic marker, gene, ss.

(I) is useful for: (a) assessing whether progression of prostate cancer; (b) monitoring the progression of prostate cancer; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate calc arching prostate cancer in a patient; (f) assessing the prostate cancer has metastasized in a patient; (d) assessing the prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

LSNA and lung specific protein (LSP) sequences have cytostatic activity and can be used in gene therapy and vaccines. LSNAs and LSPs are useful for diagnosing and monitoring the presence and metastases of lung cancer in a patient. An antibody that specifically binds to an LSP can be used for decermining the presence of an LSP in a smalle as for treating a patient with lung cancer, particularly by inducing an immune response against the

(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogent potential of a compound, (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy (e) selecting a composition for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .067 CAGGTACCTAACCAGGCCAAATGTTGCCTTTGGGGTTCCTGTTTCAACAGCATGGTGTGA 1126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              69
                                                                                                                                                                                                                                                                                                                                                                                                                  Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CAGGTACCTAAACAGGCCAAATGTTGCCTTTGGGGGTTCCTGTTTCAACAGCATGGTGTGA

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a mucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of complex of invention further discloses methods to a polypeptide of the invention. The invention further discloses methods to a polypeptide of the invention. The invention and/or monoclonal antibodies for carrying out the methods of the invention methods for the identification of compounds that modalate the expression or activity of the polymucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention (ADC31841. The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the case of data ind products dependent on DNA and amino acid sequences. They are contiguated and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's allowed the reacher's disease, and other results and products dependent on DNA and amino acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

(I) is useful for: (a) assessing whether progression of prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer mass metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker

1535 caaginecnaaacageecagangengreergageeneergeneergeneargacaacanagignee 1476
           comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                10 CAGGIACCIAAACAGGCCAAAIGIIGCCIITIGGGGIICCIGIITICAACAGCAIGGIGIGA
compound, and comparing the gene expression profile to a database

                                                                                                                                                                    Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells.
                                                                                                                                                                                                                                                                 The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAAATGTTGCCTTTGGGGTTCCTGTTTCAACAGCATGGTGTGAAGCGCCGCATCAACCTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
                                                                                                                                                                                                                                                                                                                                         The invention relates to nucleic acid sequences used to detect hepatitis B virus (HBV). The invention specifically claims a sense capture probe (BABL55199) corresponding to a fragment of the surface antigen (HBSAg) coding sequence (bases 150-290 at the HBV subtype adr DNA shown in ABL55204), and to inosine-containing primers (ABL55201-ABL55202) which bind to regions of the HBV genome in or near the HBSAg coding sequence. The invention also relates to DNA molecules in which at least one base is deleted, replaced or added in the capture probe sequence, and which hybridises to HBV DNA between bases 21-710 of ABL55204, and additionally encompasses methods and reagents used in detecting HBV using the capture probe of the invention. The present sequence represents a fragment of the HBV subtype adr genome encoding the surface and core antigens used in an exemplification of the invention

The invention relates to a novel stabilising reaction reagent for use in the amplification and/or detection of a target nucleic acid os comprising: preparing a reaction mixture with e.g. a nucleic acid as template, at defined pared in RNaseH; and incubation of the reaction mixture for a defined period of time to form a reaction product during the amplification of such target nucleic acid. The method is useful for stabilising and long-term storage of reaction reagents for highly sensitive and specific amplification and detection of nucleic acids particularly in identifying pathogenic microorganisms or viruses in a sample using chimeric oligonucleotide primers, which is useful in genetic engineering and clinical medicine. This polynucleotide sequence method of the invention

                                                                                                                                                                                                                                                                                                                              N(alpha)-terminal acetyltransferase. NatC
N(alpha) terminal acetyltransferases contains MaklOp,
Maklip and Makly subunits. All three subunits are
associated with each other to form the active complex

NatC
N(alpha)-terminal acetyltransferases contains Maklop,
Maklip and Maklp subunits. All three subunits associated with each other to form the active complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Direct Submission JURNAL Submitted (08-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk COMMENT CAPERIS: clone-request@sanger.ac.uk During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSENCY; Tr:, TREMBL; Wp:, WORMPEP: Information on the WORMPEP Attabase can be found at http://www.sanger.ac.uk/Fbrojects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human Group. Further information can be found at http://www.sanger.ac.uk/enc/che/che/che/che/che/che/che/che/che/ch	FPI1-213G2 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: pBAGe3.6 IMPORTANT: This sequence is not the entire insert of clone RP11-213G2 It may be shorter because we sequence overlapping sections only once, except for a short overlap. The true right end of clone RP11-213G2 is at 181864 in this sequence. The true left end of clone RP11-65C15 is at 11320 in this sequence. The true right end of clone RP11-202111 is at 100 in this sequence. humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Mar 21, 2002 this sequence version replaced gi:15787718.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr.: TREMBL; WD: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was many constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the stand content of constructed by the st
